AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q78509

Application No.: 10/579,065

**AMENDMENTS TO THE CLAIMS** 

This listing of claims will replace all prior versions and listings of claims in the

application:

**LISTING OF CLAIMS:** 

1. (currently amended): A solid electrolyte capacitor comprising a jacketed capacitor

element, the capacitor element being obtained by sequentially stacking a dielectric oxide film

layer, a semiconductor layer and an electrically conducting layer on a surface of a valve-acting

metal sintered body or electrically conducting oxide sintered body connected with an anode lead,

wherein the thickness of the semiconductor layer in the vicinity of the anode lead-connection

point on the sintered body surface connected with an anode lead is 5 µm or less and the thickness

of the semiconductor layer in the portion excluding the vicinity of the anode lead-connection

point is from 5 to 100 µm, and wherein the valve-acting metal sintered body is a tantalum

sintered body having a CV of 100,000 μF·V/g or more or a niobium sintered body having a CV

of 150,000  $\mu F \cdot V/g$  or more.

2. (original): The solid electrolyte capacitor as claimed in claim 1, wherein the

semiconductor layer is not provided in the vicinity of the anode lead-connection point on the

sintered body surface connected with an anode lead.

3. (canceled).

3

Attorney Docket No.: Q78509

AMENDMENT UNDER 37 C.F.R. § 1.111 Application No.: 10/579,065

4. (original): The solid electrolyte capacitor as claimed in claim 1, wherein the valveacting metal or electrically conducting oxide is tantalum, aluminum, niobium, titanium, an alloy mainly comprising such a valve-acting metal, or niobium oxide.

## 5-6. (canceled).

7. (original): The solid electrolyte capacitor as claimed in claim 1, wherein the semiconductor layer is at least one member selected from an organic semiconductor layer and an inorganic semiconductor layer.

8. (original): The solid electrolyte capacitor as claimed in claim 7, wherein the organic semiconductor is at least one member selected from the group consisting of an organic semiconductor comprising benzopyrroline tetramer and chloranil, an organic semiconductor mainly comprising tetrathiotetracene, an organic semiconductor mainly comprising tetracyanoquino-dimethane, and an organic semiconductor mainly comprising an electrically conducting polymer obtained by doping a dopant to a polymer containing a repeating unit represented by the following formula (1) or (2):

$$\begin{bmatrix}
R^1 & R^2 \\
X & X \\
R^5
\end{bmatrix}$$
(1)
$$\begin{bmatrix}
R^1 & R^2 \\
X & X \\
R^5
\end{bmatrix}$$

Attorney Docket No.: Q78509

Application No.: 10/579,065

wherein  $R^1$  to  $R^4$  each independently represents a hydrogen atom, an alkyl group having from 1 to 6 carbon atoms or an alkoxy group having from 1 to 6 carbon atoms, X represents an oxygen atom, a sulfur atom or a nitrogen atom,  $R^5$  is present only when X is a nitrogen atom, and represents a hydrogen atom or an alkyl group having from 1 to 6 carbon atoms, and each of the pairs  $R^1$  and  $R^2$ , and  $R^3$  and  $R^4$  may combine with each other to form a ring.

9. (original): The solid electrolyte capacitor as claimed in claim 8, wherein the electrically conducting polymer containing a repeating unit represented by formula (1) is an electrically conducting polymer containing a structure unit represented by the following formula (3) as a repeating unit:

$$\begin{array}{c|c}
 & & & & & & & \\
\hline
 & & & & & & & \\
\hline
 & & & & \\
\hline
 & & & & \\
\hline
 & & & & \\
\hline
 & & & & &$$

wherein R<sup>6</sup> and R<sup>7</sup> each independently represents a hydrogen atom, a linear or branched, saturated or unsaturated alkyl group having from 1 to 6 carbon atoms, or a substituent for forming at least one 5-, 6- or 7-membered saturated hydrocarbon cyclic structure containing two oxygen elements when the alkyl groups are combined with each other at an arbitrary position, and the cyclic structure includes a structure having a vinylene bond which may be substituted, and a phenylene structure which may be substituted.

10. (original): The solid electrolyte capacitor as claimed in claim 8, wherein the electrically conducting polymer is selected from the group consisting of polyaniline,

AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q78509

Application No.: 10/579,065

polyoxyphenylene, polyphenylene sulfide, polythiophene, polyfuran, polypyrrole, polymethylpyrrole, and substitution derivatives and copolymers thereof.

11. (previously presented): The solid electrolyte capacitor as claimed in claim 9, wherein the electrically conducting polymer is poly(3,4-ethylenedioxythiophene).

12. (original): The solid electrolyte capacitor as claimed in claim 7, wherein the inorganic semiconductor is at least one compound selected from the group consisting of molybdenum dioxide, tungsten dioxide, lead dioxide and manganese dioxide.

13. (original): The solid electrolyte capacitor as claimed in claim 7, wherein the electrical conductivity of the semiconductor is from  $10^{-2}$  to  $10^3$  S/cm.

14. (previously presented): An electronic circuit using the solid electrolyte capacitor described in claim 1.

15. (previously presented): An electronic device using the solid electrolyte capacitor described in claim 1.
